- Digital Signature is a process that guarantees that the contents of a message have not been altered in transit. When you, the server, digitally sign a document, you add a one-way hash (encryption) of the message content using your public and private key pair. Your client can still read it, but the process creates a "signature" that only the server's public key can decrypt. The client, using the server's public key, can then validate the sender as well as the integrity of message contents.
- digital signature authenticate the documents which is confirmed through electronic sign by the sender.
- A digital signature is basically a way to ensure that an electronic document (e-mail, spreadsheet, text file, etc.) is authentic. which is authenticate the sender identity done in electronic sign.
- It is a computer code.it is a secret key which can be known only by signer. It is reliable and safe. Nobody can copy it easily.
- A digital signature is an authentication mechanism that enables the creator of a message to attach a code that acts as a signature. The signature is formed by taking the hash of a message and encrypting the message with creator's private key in combination with receiver's public key(which is also created through safe and secure mechanism). Digital signature guarantees the source and integrity of the message.
- digital signature is also known as an electronic signature
- A digital signature is a kind of signature and has the only difference that it is made by the use of a mathematical algorithm. It is used to certify the sign and validation of the documents, file or software instead of doing it on paper.
- digital signature ek electronic password h jiske through internet par data secure rhta h or yah ek tarike se apke sign hi hota h yaha apke sign private or secure rhte h
